CORE Assist Initiative

Empowering Students with Assistive Technology

CORE Library in partnership with Accessibility Services

Joy Kim (She/Her)

Personal	Professional
2nd generation Korean + American born in Los Angeles	BA English, MA's both K12 and Higher Education, MLIS
Maternal grandmother North Korean Refugee	K12 teaching 10 years
Peregrino for the Camino de Santiago	K12 Librarian 4 years College Librarian 4 years
Love to explore/travel– teaches me to expand my mind and heart!	Librarian and Educator passionate about matters of equity and justice

Goals and Objectives

Key aims for the feedback success

- Empower disabled student voices and create belonging through feedback on assistive technology tools in the library
- Improve library awareness of assistive technology tools.
- Foster collaborative feedback and engagement through student-centered methods online

Collaboration

Partnering with the Assisted Technology Office will help us understand current tools and gather valuable student input to enhance their library experience.

Assessment of Tools

Evaluate existing assistive technology tools to determine their effectiveness and suitability for student needs. i.e. Is the 3rd floor ideal for workstations?

Student Interviews

Conduct interviews with students to gain insights and feedback on their experiences with assistive technology resources.

Create a digital platform

All stakeholders including students who use Assistive Technology come to a collective decision to choose a platform(i.e. Google form, survey tools, online forum?)

Digital Platforms

Exploring various digital platforms will help us create an effective space for students to rate and review assistive technology tools in the library.

Platform Comparison

Analyzing existing rating systems to identify the most suitable options for our needs.

Security Analysis

Evaluating platform security features to ensure student data remains protected and secure.

Scalability Assessment

Assessing platforms for their ability to grow with increasing user participation over time.

Designing a User-Friendly Interface

Key elements for effective student interaction

- Intuitive navigation for all users
- Clear rating system for easy feedback
- Accessible design for diverse needs
- Mobile compatibility for on-the-go access

Promotion Strategies for Engagement

Effective ways to encourage student participation- Student Ambassadors

- Launch a creative social media campaign
- Make library announcements for visibility
- Integrate into student orientation sessions
- Engage through faculty outreach initiatives

Continuous Improvement Strategies

Key methods for gathering user feedback

- Regular surveys as QR codes by equipment to gauge student experiences
- Data analysis to identify trends and needs
- Iterative updates based on user suggestions
- Engaging students through feedback collection methods
